ProThotics Motion Control

#19-217

Description

The ProThotics Motion Control has a metatarsal rise, as well as a structural stabilizer which promotes maximum stability, prevents pronation and rolling ankles, and helps to correct postural alignment.

Features:

- Strong arch and metatarsal rise helps relieve pain in the ball of the foot and guard against harmful overpronation.
- Biomechanical engineering utilizes advanced materials to provide support and stability for foot health and comfort.
- Polyurethane base layer provides cushioning that will never flatten out over time or lose its comfort.
- Vy-Gel™ performance grade elastomer pads provide shock absorption across the forefoot and heel strike to protect against fasciitis.
- Anti-friction fabric wicks moisture away from the foot, reducing heat and shear to prevent blisters.
- Lotusof™, a full length open cell, breathable, anti-microbial, anti-odor polyurethane mid-layer keeps feet dry for all-day comfort.

Available in six sizes.
